Long Line Painting

Water Blasting

Fahrner Asphalt Sealers LLC truck applicators have the flexibility of painting several types of road projects such as: state highways, interstates, county roads, township streets/roads, city streets, temporary and same day paint. Trucks are equipped with a distance measuring instrument to accurately measure work.

Ensuring the safety of the motoring public is our highest priority. Our trucks are equipped with warning devices including advance warning signs, arrow boards, flashers, strobes, beacons, cones, multi truck convoys and crash bumpers.

Our highly maneuverable water blasting machine utilizes 40,000 psi, ultra-high pressure water for pavement marking removal or surface preparation. It prepares surfaces for painting by removing curing compound, rubber and tack.

Fahrner Asphalt Sealers has used water blasting on airport runways, highways and city streets for paint removal.

Advantages of water vs. sand blasting

- ◆ Better profile on the pavement
- ◆ Less damage to the pavement surface
- ◆ Removes permanent paint faster
- ◆ No dust or silica is in the air

1. Removes thermoplastic, epoxy, paint and tape lines.
2. Excellent choice for the annual cleaning of parking structures.
